Technology transforming solid waste operations

SmartCity is built to meet your operation's specific needs.

MANAGER PORTAL

SmartCity's main interface is the Portal, a web-based platform that collects data from supporting software and hardware located in government fleet vehicles. The Portal is the operational hub for solid waste fleets. Managers, supervisors, dispatchers, and customer service representatives can perform an array of functions to control their day-to-day operations using data.
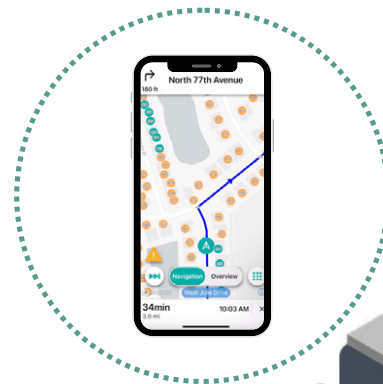

THE DRIVER APP

The Driver App is SmartCity's mobile tool built to meet operator needs when out in the field. Data collected from the Driver app feeds in the Manager Portal in near-real time and serves as key information for supervisors. Key features of the Driver app include digitized route information, service verification, turn by turn navigation, and issue logging at the curb.

SmartCity is an all-in-one solution

Digitize all operations

Save on operational costs

Enhance customer service workflows

Verify service automatically

FEATURES

- Work order management
- Exception flagging
- Identify city insights (potholes, graffiti, etc)
- High density turn-by-turn navigation
- All-in-one camera
- Daily route management
- Customized reports
- Pre/post trip inspection reporting
- Weight ticket reporting
- Vehicle diagnostics

- Driver performance
- Breadcrumb trails & route playback
- Integrated billing
- Route optimization
- Asset management
- Inventory management
- Automatic service verification
- Travel path editing
- Dispatch
- Artificial Intelligence

INTEGRATION CAPABILITIES

Routeware uses REST APIs to integrate with the following:

- Telematics providers
- 311 systems
- Scales
- Asset management systems
- Work order management systems
- Esri
